

OE42 Septic Tank Concentrate

*Eliminate Odours * Reduce Pump-Outs * Reduce Blockages * Improve Soak-away Drainage * Prolong the Life of Your System*

Easily Maintain your Septic System

When functioning properly, household wastes are collected in your septic tank and then broken down, liquefied, and deodorized. Because this process is biological, it is easily upset and may stop working.

Some common factors that tend to upset the natural process are:

- Overuse of disinfectants
- Overuse of bleaches
- Overuse of detergents
- Very hot or cold conditions.

Such factors kill the micro-organisms that work to keep your septic system running properly. OE42 replenishes and boosts the supply of these valuable micro-organisms and allows natural activity to continue.

Simple and Easy to Use

Using OE42 is simple... Just drop in the convenient pre-packaged, pre-measured pouches into your lavatory bowl. The plastic pouches dissolve away so you don't have to handle the powder. No fuss - no bother - no effort!

Benefits of OE42:

- Reduces Frequent Pumping of Septic Tank
- Extends Life of Drain Area
- Controls Bad Smells
- Improves Drain Field Percolation
- Keeps Sewer Lines Open
- Neutralizes Detergent Bleach
- Prevents Drain Blockage
- Will Not Attack Plastic or Metal Plumbing
- Safer to Use than Harsh Chemicals
- Degrades Waste Faster
- Degrades Paper, Grease and Vegetable Waste

Why add OE42?

It's easy to protect your septic system and keep it operating smoothly by simply adding one pouch per month.

The initial application of OE42:

- Restores the natural biological process
- Boosts the existing biological activity

Regular monthly applications will:

- Keep your septic tank working effectively
- Prevent expensive emergencies
- Prevent additional pumping costs.

OE42 is completely safe to use as directed.

It is **completely natural**, containing no corrosive chemicals, caustic or acids, and is hazard free.

It will not damage metal, ceramic, or plastic parts of the drainage system.

Understanding your Septic System

If you are like most people, you know very little about your septic system. This is understandable. In urban and suburban areas there are sewers to carry household waste to municipal wastewater treatment plants. In more rural areas, however, septic tank systems provide the functions of both sewers and treatment plants. Webster's Dictionary defines the septic tank as "a tank in which waste matter is decomposed through bacterial action".

If you could look inside your septic tank, you would find three layers. The top layer is the "Scum" layer where organic material floats to the surface. Bacteria in the septic tank biologically convert this material to a liquid. The middle layer is the "Effluent" layer where mostly clear water will be found. This clear water is the only layer that should enter your absorption area. The bottom layer is the "Sludge" layer. This layer is where the inorganic or inert solid materials and the by-products of bacterial digestion accumulate.

All household waste is disposed of through the septic system. The proper operation of the septic system is essential to health, property value, and the surrounding ecology. A small commitment to the care of your septic system will protect you from the nightmare created by a failing system.

Other Information:

OE42 Specifications

Free-flowing granular powder

Colour: Green/Blue

Bacterial Content: 5 Billion per gram

Packaging

25-gram water-soluble pouches supplied in packs of 12 (one year's supply). Other packaging is available.

Storage/Use

DO NOT FREEZE! Store in a cool dry location. Do not inhale dusts, avoid excessive skin contact. SEE MSDS.

DO NOT allow to become wet and avoid wet hands when using OE42.

Application Instructions

Tank Size	Initial Dosage	Maintenance**
1000-1500 gallons	1 Booster pouch immediately. Second pouch 3 days later. 3 days later, start normal monthly addition.	1 pouch per month
1500-3000 gallons	2 Booster pouches immediately. Second two pouches 3 days later. 3 days later start normal monthly addition.	2 pouches per month

** Add as regularly as possible. If application is forgotten, add the missed pouches as soon as possible and continue normally with regular addition.
